

## DaletPlus ActiveLog

### End-to-End Software Solution for Recording, Transcribing and Archiving Digital Audio and Video

Developed on Dalet's proven media management technology, DaletPlus ActiveLog provides a common environment to address the many needs of large scale media recording and management. The core architecture records multiple channels and formats simultaneously. Media is cataloged and centrally stored for quick retrieval and review - even while recording is still in process. DaletPlus ActiveLog administrators use streamlined controls to define privileges, automate recording sessions and distribute media. Novice users can easily operate the familiar recording and playback controls with little or no training. For advanced users, DaletPlus ActiveLog provides editing tools to storyboard and package audio and video.

DaletPlus ActiveLog User Scenarios:

- Parliamentary or Legislative Proceedings
- Court Proceedings and Evidence Depositions
- Training Centers and Classrooms
- Public Meetings or Live Events
- Media Monitoring and Market Research Facilities

### DaletPlus ActiveLog Feature Highlights:

Failsafe recording: multiple audio tracks with associated video, operator control and scheduled buffered continuous recording;  
Digital storage and media management: Conditional access to recordings; Flexible asset management, workflow and notification engine;  
Local and remote monitoring: IP based streaming for live preview, marker insertion and annotation, instant replay;  
Accelerated transcription tools: automatic turn allocation and rota management, easy-to-use audio and video player, advanced foot pedal control;  
Secured distribution: automated format conversion, intranet and extranet publishing, CD-ROM and DVD production;  
Long term on-line, near-line and off-line archiving.
